

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION V

MEMORANDUM

US EPA RECORDS CENTER REGION 5

422479

DATE: September 29, 1992

SUBJECT: Nutting Truck
Interim Close-Out Report

FROM: Tinka G. Hyde, Chief
MN/OH Section #3

TO: Project File

THRU: Jennifer Wendel
Remedial Project Manager
Nutting Truck

The purpose of this memo is to clarify the status of the Nutting Truck site close-out. The Superfund Site Close-Out Report for this site was originally written as an Interim Site Close-Out Report; however, at the request of Headquarters, the title was changed to Preliminary Site Close-Out Report. The reason for this request was based on Headquarters decision to phase out the Interim Close-Out Reports. This change has been accounted for in the FY93 SCAP manual; however, the FY92 SCAP manual recognizes the Interim Close-Out Report but not the Preliminary Close-Out Report. Given the premature elimination of the Interim Close-Out Report, this memo was necessary to provide documentation of the original intent of the Site Close-Out Report for this site.

Based on "Update No. 2 to the "Procedures for Completion and Deletion of NPL Sites" dated February 19, 1992, the Preliminary Close-Out Report serves as documentation of site construction completion. Whereas, the Interim Close-Out Report is to be used for Long-term Remedial Actions (LTRAs) where the remedy is operational and functional but cleanup standards have not yet been achieved. Since the RA construction (groundwater pump and treat) for the Nutting Truck site was completed in November 25, 1987, and has continued to operate through the present, this site is considered an LTRA. Therefore, the Preliminary Site Close-Out Report should actually be considered an Interim Site Close-Out Report.
